

**PRINTER HAVING EMBEDDED FUNCTIONALITY FOR
PRINTING TIME-BASED MEDIA**

ABSTRACT OF THE DISCLOSURE

A multifunction printer enables the printing of time-based media. Based on received time-based media data, the printer produces a paper or other printed output as well as a related electronic output. Together, the printed and electronic outputs provide a representation of the time-based media. Depending on the desired application for the printer, the printer may include any combination of mechanisms for receiving media data, printing the printed output, and producing the electronic output.
